Pierpaolo Basile is an Assistant Professor at the Department of Computer Science, University of Bari "Aldo Moro" where he received his Ph.D. in Computer Science in 2009. He is a member of the Semantic Web Access and Personalization Research Group at the University of Bari and a board member of the Italian Association for Computational Linguistics. Pierpaolo Basile focused his research on Natural Language Processing, in particular on Lexical Semantics. He has published several papers in international journals and conference/workshop proceedings.

He has been invited researcher at the Alan Turing Institute (UK), where he investigated diachronic approaches for lexical semantic change detection.

Pierpaolo Basile co-organized several evaluation campaigns for natural language processing tools and conferences/workshops on the same topic. I served as a program committee member in international conferences in Natural Language Processing, Artificial Intelligence, and Semantic Web: ACL, EACL, EMNLP, IJCAI, ISWC, ESWC.
